

What Manual Reporting Is Really Costing You

The calculation most businesses never do.

THE OBVIOUS COST

Time.

4 hours per week building the same report:

$4 \times 52 \text{ weeks} = 208 \text{ hours per year}$

At £25/hour fully loaded:

$208 \times £25 = £5,200 \text{ per year}$

→ **On one report. Every year. Indefinitely.**

THE HIDDEN COST

Decisions made on stale data.

If the report takes a week to produce,
management is always looking backwards.

The cash flow problem from last Tuesday
is visible next Friday.

→ **Late data means late decisions.**

THE ERROR COST

Manual processes introduce errors.

A formula right last month, wrong this month.

A cell updated in one place but not another.

Numbers that do not match because two people used different source data.

→ **Decisions on wrong numbers cost more**

→ **than the report itself.**

THE COMPARISON

Manual reporting: £5,200/year
plus stale, possibly inaccurate data.

Automated reporting:

One-time build: £1,500-£4,000

Payback: 6-12 months

Ongoing cost: zero

→ **After payback, every year is pure saving.**

Stop rebuilding the same report.

Book a free 30-minute call.

We will look at your current process
and tell you what automation
would look like and cost.

Most businesses pay back the build
cost within 12 months.
