5 Signs Your Business Has Outgrown Its Software

Most businesses ignore these until they hire someone to manage the workarounds.

→ **Swipe to read**

Your team has built workarounds.

Everyone accepts them as normal.
Nobody questions them anymore.

One client had 7 spreadsheets feeding a "master" sheet that broke every month. Three people knew how to fix it. One had already left.

→ **Workarounds are not a process. They are a symptom.**

You pay for features you never use.

While missing the ones you need daily.
Adapting your process to fill the gap.

A recruitment agency paid £340/month for a CRM. They used 4 of its 60+ features. The 5 features they actually needed were not in it.

→ **You are paying for someone else's requirements.**

New starters need training on the workarounds.

Not just the software.
How you actually use it.

One onboarding doc we saw had a section titled "What the system says vs what we actually do." That is the problem in one line.

→ **If the gap needs training, the tool is wrong.**

Data lives in multiple places.

Nobody is sure which version is current.
Someone always has to ask someone else.

A professional services firm had client data in Xero, a CRM, two spreadsheets, and email threads. Four sources. None agreed.

→ **Scattered data is a systems problem, not a people problem.**

The monthly cost keeps rising.

But the value delivered does not.
SaaS pricing only moves one direction.

HubSpot Professional: £41/month in 2022. £89 in 2024. £134 in 2026. Same features. A custom tool would have paid back by year 2.

→ **Do the 3-year total cost calculation. The answer usually surprises.**
